Chapter 1

Data Submission

1.1 Overview of Data Submission Process

There are four major steps in the data submission process:

1. Submit raw sequence data to the European Genome-phenome Archive
2. Prepare the BLUEPRINT submission files according to DCC data format specifications
3. Verify conformity of the submission files
4. Submit files to the DCC Secure FTP server

All submitted data must be based on **Human reference genome assembly GRCh37** and **GENCODE 15** (which uses **Ensembl gene set version 70**)

When submitting experimental data, please make sure you've already deposited your raw data to the appropriate public data repositories (eg: sequencing reads to EBI EGA) and then populate in your submission files the data elements **raw_data_repository** and **raw_data_accession** with the correct repository and accession number respectively.

1.2 Preparing Sample Tracking Data and Analyzed Contents for their submission

Submitted experimental data files must be from any one of these categories:

- [Sample Tracking](#)
- [Gene Expression](#)
- [Exon Junctions](#)
- [DNA *-lation \(Methylation, Hydroxy-Methylation, Formylation, etc...\)](#)
- [Protein-DNA interactions](#)
- [Regulatory regions](#)

BLUEPRINT DCC is hosting both sample tracking data and analyzed contents. Contents must be sent following the textual tabular formats defined below. Files with those contents must also follow the BLUEPRINT DCC file naming convention.

Each submitter must have a unique signing key, provided by DACO and DCC. Each file in a submitted archive must be accompanied by its SHA1 **uncompressed** content digest file, digitally signed with the submitter's signing key.

Signed digest generation and verification using OpenSSL

```
# Signed digest of uncompressed contents, will be dlat-p--001-20120920--mycode.txt.sha1
openssl dgst -sha1 -sign subKey.pem -out dlat-p--001-20120920--mycode.txt.sha1 \
    dlat-p--001-20120920--mycode.txt

# Signed digest of already compressed contents
bunzip2 -c dlat-p--001-20120920--mycode.txt.bz2 | openssl dgst -sha1 -sign subKey.pem \
    -out dlat-p--001-20120920--mycode.txt.sha1

# Verification of uncompressed contents using
# signed digest dlat-p--001-20120920--mycode.txt.sha1
openssl dgst -sha1 -verify subKey.pem.pub -signature dlat-p--001-20120920--mycode.txt.sha1 \
    dlat-p--001-20120920--mycode.txt

# Verification of compressed contents
bunzip2 -c dlat-p--001-20120920--mycode.txt.bz2 | openssl dgst -sha1 -verify subKey.pem.pub \
    -signature dlat-p--001-20120920--mycode.txt.sha1
```

The procedure to submit analyzed contents to BLUEPRINT DCC also involves first having the raw data used for the analysis in the [European Genome-phenome Archive \(EGA\)](#), as all the metadata entries from the analyzed contents to be stored in BLUEPRINT DCC **must point** to the original raw data.

1.2.1 File Naming Conventions

Submitted files, containing either sample tracking data or analyzed experiment contents, must follow next file naming convention

```
featureType-fileType--institutionCode-dateFileCreated--freeField.txt
```

```
featureType-fileType--institutionCode-dateFileCreated--freeField.txt.sha1
```

The file name components are mapped in the next way:

Components	Description	Key
<i>featureType</i>	Sample Tracking data Gene Expression Exon Junctions DNA *-lation (Methylation, Hydroxy-Methylation, Formylation, etc...) Protein-DNA interactions Regulatory regions	sdata exp jcn dlat pdna rreg
<i>fileType</i>	Metadata file Primary data file Secondary data file Gene expression file Donor file Specimen file Sample file Donor's Family file	m p s g donor specimen sample family
<i>institutionCode</i>	Institution submitting data	CV Table A.5.1
<i>dateFileCreated</i>	The date on which the file is created	YYYYMMDD (ISO-8601)
<i>freeField</i>	An alphanumeric field (max length of 16 characters) where submitters can put internal codes, file sequence numbers, etc...	e.g.: <i>mysample</i> , <i>0B1845J</i>

Different file types of the same feature type are interrelated, because the data they are storing is intertwined. Specific relations are defined on the documentation of each feature type and their file types. For instance, information stored in a primary data file is related and depends on the data from its corresponding metadata file, and the same happens to secondary data files and primary data files. Metadata file contents are related to sample tracking data sample files.

1.2.2 Tabular File Structure

The submitted analyzed contents are kept in tab-delimited text files. General comments may be added to the beginning of the file with a hash ('#') prefixed at beginning of each comment line. The first non-comment line is the header containing the names of the columns. Each column corresponds to a data element defined in DCC Submission Tabular Formats specification ([Chapter 2](#)).

There is a subset of comment lines used to attach data labels to the text files. These data labels follow the form '#labelName value [value ...]'. Currently acknowledged data labels are:

- **format:** This label is **required**, and its value defines the BLUEPRINT data formatting schema used on the file.
- **depends:** Although this label is not always required, it is important to validate the data coherence of the whole data set, because it ensures related data is not corrupted. The values of this label are the file on the same submission this file is related to (for instance, the name of a metadata file), and the SHA1 digest value (in its hexadecimal representation) of that file's contents.

There are several ways to generate the SHA1 digest of a file, like libraries in most of the programming languages and command-line tools:

SHA1 digest generation

```
# Getting the SHA1 digest value of uncompressed contents using OpenSSL
openssl dgst -sha1 dlat-p--001-20120920--mycode.txt

SHA1(dlat-p--001-20120920--mycode.txt)= 81ae49a7014d2d0260625d3535fa6e2a4a0bc06f

# Getting the SHA1 digest value of uncompressed contents using shasum
shasum dlat-p--001-20120920--mycode.txt

81ae49a7014d2d0260625d3535fa6e2a4a0bc06f  dlat-p--001-20120920--mycode.txt
```

An example file is shown below (note that parts of the lines are omitted for readability):

dlat-p--001-20120920--mycode.txt

```
# This is an example of a primary analysis file for simple somatic mutations.
# File name: dlat-p--001-20120920--mycode.txt
#
# And it has its labels
##format 0.2.3.99.1
##depends dlat-m--001-20120920--mycode.txt 03366af5145107cc818f4827e86b61dcf998ff29

```

All the declared columns for each file type must be set. Data columns are labeled as identifier or reference (I), required (R), desirable (D) or optional (O). Data providers (i.e. submitters) must put all the efforts in order to provide values for the idref and required data columns. The exception for this rule are the desirable fields, required fields which can be unknown on the first submissions, but in that case the fields these exceptions are properly documented.

There are several possible reasons why a column value (either desirable or optional) has not been provided. Next reserved codes must be used to describe the reason:

Code	Meaning
#FF#	Data not supplied at this time (<i>for future fill</i>)
#NA#	Not applicable for the context of the surrounding knowledge
#VO#	Data verified to be unknown (void, undef, null)
#DE#	Data derived from a required or idref field

Some data columns described in this submission manual contain values used as identifiers on BLUEPRINT DCC (e.g. `analysis_id`, `regulatory_region_id`, ...). As such, these identifiers should uniquely identify the entity they are referring (an analysis, a regulatory region, ...), and the identifier's value should be globally unique within a center's data submission. Also, these identifiers should be consistent along the different data submissions and releases. If you have to generate your own identifiers, there are some general recommendations, like using the same prefix for the identifiers of the same kind.

When you are submitting string values for columns which can contain URLs or multiple values delimited by commas, each separate value string, before being joined, should be **URI encoded**.

1.3 File Submission Procedure

Files with the contents to be submitted, along with their corresponding signed digest, must be sent in a single **tar** archive. Either the tar archive or its embedded contents should be submitted compressed, using **gzip**, **bzip2** or **xz** formats.

To be finished/defined

Chapter 2

DCC Submission Tabular Formats

2.1 Sample Tracking Submission File Specifications

Overview

There are three **required** sample and tissue annotation submission files, and one **optional** template file.

Core Sample Tracking Data Files

1. *Donor Data File (donor)*
Mandatory information about the donor's age, gender and vital status.
2. *Specimen Data File (specimen)*
Mandatory information about a specimen that was obtained from a donor. There may be several specimens per donor that were obtained concurrently or at different times.
3. *Analyzed Sample Data File (sample)*
Mandatory information about an analyzed sample that was subjected to molecular analysis. There may be several analyzed samples per specimen, for example, blood samples at different ages.

All data submissions to the DCC **must include the three core sample tracking data files**.

Optional Template Files

1. *Donor Family History (family)*
Optional details about family history of the donor

Coding of donor IDs

The three mandatory data files contain donor, specimen and analyzed sample IDs, respectively. These IDs are to be coded specifically for BLUEPRINT purposes and only the submitting group will keep the key that will permit to link back the data to the individual donors. The key must not be communicated to the data users. It should not be derived from other IDs such as biobank or hospital identifiers. These IDs are to be coded in such a way that they cannot be tracked back to the individual donors, except by the submitting group. IDs are assigned by each submitting group, and must be unique within all the data submitted by that group (i.e. no duplicate IDs allowed). The DCC will prevent collisions between similar IDs submitted by different groups by including the project source column by default in all BioMart queries.

2.1.1 Donor Data File

Donor Data File [donor] (required)

This submission file describes a donor from which one or more specimens were obtained.

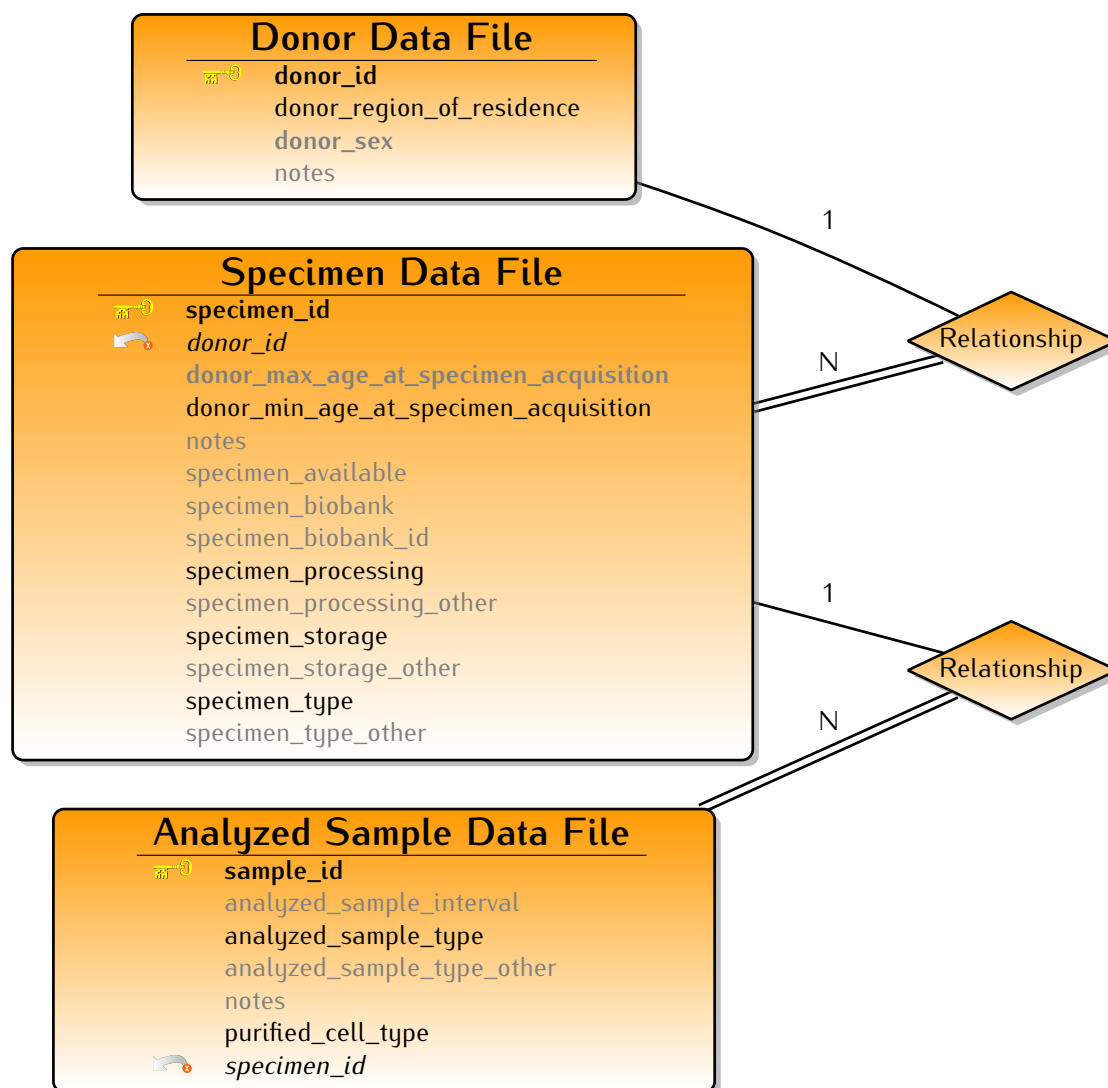

Figure 2.1: Sample Tracking Submission File Specifications Sub-Schema

Table 2.1.1: Donor Data File

Name	Type	Need	Description / Values
donor_id	string	I	Unique identifier for the donor; assigned by data provider.
donor_region_of_residence	string[] (array seps ,)	R	Country, and optionally state or province code, but not city. <i>ISO3166-1-alpha-2 or ISO3166-2 codes, eg: "CA" or "CA-ON" (See external CV description A.4)</i>

Continued on next page

Table 2.1.1 – concluded from previous page

Name	Type	Need	Description / Values
donor_sex	string	D	Donor biological sex. <i>"Other" has been removed from the controlled vocabulary due to identifiability concerns.</i> m = male f = female
notes	string	0	Any additional non-identifying information can be included here.

2.1.2 Specimen Data File

Specimen Data File [specimen] (required)

This submission file describes a specimen from which one or more samples were derived. Use additional rows for more than one specimen from the same patient. If more than one specimen was extracted during the same procedure, each gets a distinct ID.

Table 2.1.2: Specimen Data File

Name	Type	Need	Description / Values
specimen_id	string	I	Unique identifier for the specimen assigned by data provider.
donor_id	string	R	<i>Unique identifier</i> for the donor; assigned by data provider. Relates to Donor Data File (donor_id)
donor_max_age_at_specimen_acquisition	duration	D	Donor max age when the specimen was acquired. If it is '#DE#', then it is the same value as "donor_min_age_at_specimen_acquisition"
donor_min_age_at_specimen_acquisition	duration	R	Donor minimal age when the specimen was acquired, in ISO-8601 duration (basic format)
notes	string	0	Any additional non-identifying information can be included here.
specimen_available	boolean	0	Whether additional tissue is available for followup studies.
specimen_biobank	string	0	If the specimen was obtained from a biobank, provide the biobank name here
specimen_biobank_id	string	0	If the specimen was obtained from a biobank, provide the biobank accession number here.

Continued on next page

Table 2.1.2 – continued from previous page

Name	Type	Need	Description / Values
specimen_processing	string	R	Description of technique used to process specimen 1 = cryopreservation in liquid nitrogen (dead tissue) 2 = cryopreservation in dry ice (dead tissue) 3 = cryopreservation of live cells in liquid nitrogen 4 = cryopreservation, other 5 = formalin fixed, unbuffered 6 = formalin fixed, buffered 7 = formalin fixed & paraffin embedded 8 = fresh 9 = other technique
specimen_processing_other	string	0	If "other" specified for specimen_processing, may indicate technique here.
specimen_storage	string	R	Description of how specimen was stored. For specimens that were extracted freshly or immediately cultured, answer (1) "NA". 1 = frozen, liquid nitrogen 2 = frozen, -70 freezer 3 = frozen, vapor phase 4 = RNA later frozen 5 = paraffin block 6 = cut slide 7 = other
specimen_storage_other	string	0	If "other" specified for specimen_storage, may indicate technique here.
specimen_type	string	R	Controlled vocabulary description of specimen type. 1 = primary tumour 2 = tumour local recurrence 3 = tumour metastasis to local lymph node 4 = tumour metastasis to distant location per_blood = peripheral blood 6 = bone marrow 7 = lymph node c_tissue = normal control (tissue adjacent to primary) c_blood = normal control (blood) c_other = normal control (other) d_tissue = disease tissue (other) cord_blood = cord blood

Continued on next page

Table 2.1.2 – concluded from previous page

Name	Type	Need	Description / Values
specimen_type_other	string	0	Free text description of site of specimen if "normal control (other)" or "disease tissue (other)" was specified in specimen_type field.

2.1.3 Analyzed Sample Data File

Analyzed Sample Data File [sample] (required)

This submission file describes an analyzed sample on which molecular characterization was performed. It includes both control samples (from healthy people) and samples from ill people.

Table 2.1.3: Analyzed Sample Data File

Name	Type	Need	Description / Values
sample_id	string	I	<i>Unique identifier</i> for the sample assigned by data provider
analyzed_sample_interval	integer	0	Interval from specimen acquisition to sample use in an analytic procedure (e.g. DNA extraction), in days
analyzed_sample_type	string	R	Controlled vocabulary description of sample type n_blood = Normal blood L_blood = Leukemic blood 3 = Normal control adjacent to primary 4 = Normal control from non-tumour site 5 = Control from cell line derived from normal tissue 6 = Normal mouse host 7 = Primary tumour 8 = Mouse xenograft derived from tumour 9 = Cell line derived from tumour 10 = Cell line derived from xenograft 11 = Other (specify)

Continued on next page

Table 2.1.3 – concluded from previous page

Name	Type	Need	Description / Values
analyzed_sample_type_other	string	0	Free text description of site of sample if "other" was specified in <i>sample_type</i> field
notes	string	0	Any additional non-identifying information can be included here.
purified_cell_type	string	R	Purified cell type for the sample (See external CV description A.3)
specimen_id	string	R	Unique identifier for the specimen assigned by data provider. Relates to Specimen Data File (specimen_id)

2.2 Gene Expression

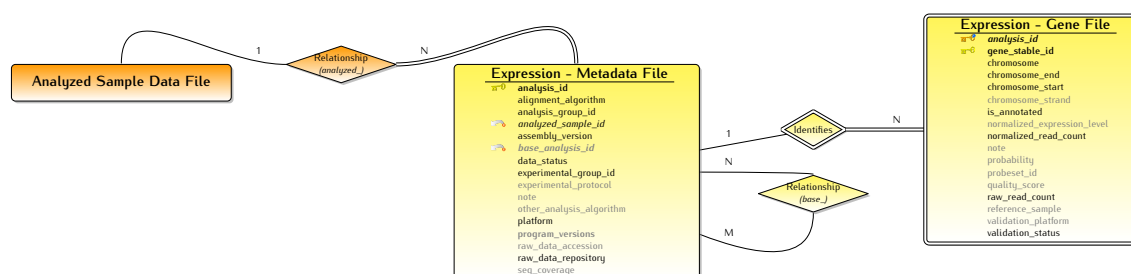

Figure 2.2: Gene Expression Sub-Schema

2.2.1 Expression - Metadata File

Expression [exp] – Metadata File [m]

Table 2.2.1: Expression - Metadata File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
analysis_group_id	string	R	Identifier of the analysis group (i.e. the one who prepared/run the pipeline) (See CV A.5)

Continued on next page

Table 2.2.1 – concluded from previous page

Name	Type	Need	Description / Values
analyzed_sample_id	string	R	Unique identifier for the sample assigned by data provider Relates to Analyzed Sample Data File (sample_id)
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_analysis_id	string[] (array seps ,)	D	Unique identifier for the analysis performed for a particular set of samples Relates to Expression - Metadata File (analysis_id)
data_status	integer	R	The status of the analysis over the associated raw data 0 = Raw data available at the EGA, but not more 1 = Raw data available at the EGA, analysis in process 2 = Analysis results obtained (analysis finished)
experimental_group_id	string	R	Identifier of the experimental group who did the experimental analysis (See CV A.5)
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
program_versions	compound[] <i>program:version</i> (array seps ;)	D	The versions of (some of) the programs used for the analysis
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.2.2 Expression - Gene File

Expression [exp] – Gene File [g]

Table 2.2.2: Expression - Gene File

Name	Type	Need	Description / Values
<i>Continued on next page</i>			

Table 2.2.2 – continued from previous page

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples Relates to Expression - Metadata File (analysis_id)
gene_stable_id	string	I	For annotated gene, use Ensembl gene ID. Otherwise, use assemblyBuild_chr_start_end where assemblyBuild is hg19.
chromosome	string	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
is_annotated	boolean	R	If it is true, it indicate if the expressed fragment is annotated in GENCODE/Ensembl (i.e. gene_stable_id contains a Ensembl Gene Identifier)
normalized_expression_level	decimal	0	Normalized value of expression level if analyzed by microarray platforms
normalized_read_count	decimal	R	Normalized count of sequencing reads if analyzed by sequencing platforms
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the mutation/variation call
probeset_id	string	0	ID of the probeset used in microarray if analyzed by microarray platform
quality_score	decimal	0	Average quality score for the mutation/variation call
raw_read_count	integer	R	Raw count of sequencing reads if analyzed by sequencing platforms
reference_sample	string	0	ID of the reference analyzed sample if differential expression is measured
Continued on next page			

Table 2.2.2 – concluded from previous page

Name	Type	Need	Description / Values
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.3 Exon Junction

The following diagram, based on the one from ICGC DCC manual, illustrates how junction_id should be generated, how junction_read_count, exon1_number_bases and exon2_number_bases are calculated:

Figure 2.3: Junction Read Count explanation

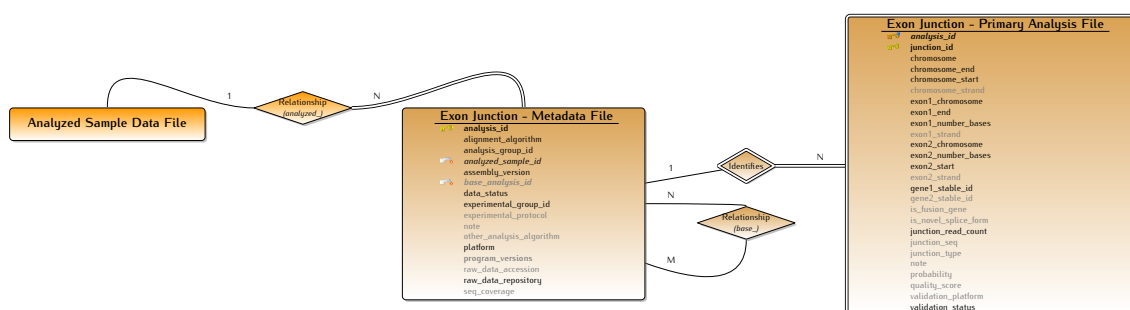

Figure 2.4: Exon Junction Sub-Schema

Exon Junction [jcn] – Primary Analysis File [p]

Table 2.3.2: Exon Junction - Primary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples Relates to Exon Junction - Metadata File (analysis_id)
junction_id	string	I	For known exons, use exonID1_exonID2 where exonID1 and exonID2 are Ensembl IDs of the 5' and 3' exons, respectively. For novel or putative exons, use assembly-Build_exon1chr_exon1end_exon2chr_exon2start where assemblyBuild is hg18 or hg19; exon1chr and exon2chr are the chromosomes of the 5' and 3' exons, respectively; exon1end is the end position of the 5' exon; exon2start is the start position of the 3' exon.
chromosome	string	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
exon1_chromosome	string	R	Name of the chromosome containing the 5' exon (#) (See CV A.7)
exon1_end	integer	R	End position of the 5' exon on the chromosome

Continued on next page

Table 2.3.2 – continued from previous page

Name	Type	Need	Description / Values
exon1_number_bases	integer	R	Number of bases from 5' exon
exon1_strand	integer	0	Chromosome strand of the 5' exon -1 = Reverse strand 1 = Forward strand
exon2_chromosome	string	R	Name of the chromosome containing the 3' exon (#) (See CV A.7)
exon2_number_bases	integer	R	Number of bases from 3' exon
exon2_start	integer	R	Start position of the 3' exon on the chromosome
exon2_strand	integer	0	Chromosome strand of the 3' exon -1 = Reverse strand 1 = Forward strand
gene1_stable_id	string	R	Stable ID of the gene containing the 5' exon at the junction. For GENCODE/Ensembl annotated gene, use Ensembl gene ID. For putative and novel gene, use assemblyBuild_chr_start_end where assemblyBuild can be hg18 or hg19.
gene2_stable_id	string	0	In the case of a fusion gene, provide the Stable ID of the gene containing the 3' exon at the junction. For GENCODE/Ensembl annotated genes, use Ensembl gene ID. For putative and novel genes, use assemblyBuild_chr_start_end where assemblyBuild can be hg18 or hg19.
is_fusion_gene	boolean	0	Indicate if the function is the result of a fusion gene
is_novel_splice_form	boolean	0	Indicate if the splice form is novel
junction_read_count	integer	R	Count of sequencing reads that span across exons
junction_seq	string	0	Provide junction sequence if either is_fusion_gene or is_novel_splice_form is true
junction_type	integer	0	Type of junction 1 = Canonical 2 = Non-canonical 3 = U12
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the mutation/variation call
quality_score	decimal	0	Average quality score for the mutation/variation call
<i>Continued on next page</i>			

Table 2.3.2 – concluded from previous page

Name	Type	Need	Description / Values
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.4 Protein-DNA interactions

Figure 2.5: Protein-DNA interactions Sub-Schema

2.4.1 Protein-DNA interactions – Metadata File

Protein-DNA [pdna] – Metadata File [m]

Table 2.4.1: Protein-DNA interactions – Metadata File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
NSC	decimal	0	Normalized strand cross-correlation of the analysis (see ENCODE quality metrics)
RSC	decimal	0	Relative strand cross-correlation of the analysis (see ENCODE quality metrics)
alignment_algorithm	compound name;url	R	Name of alignment algorithm and URL to written protocol
analysis_group_id	string	R	Identifier of the analysis group (i.e. the one who prepared/run the pipeline) (See CV A.5)
analyzed_sample_id	string	R	Unique identifier for the sample assigned by data provider Relates to Analyzed Sample Data File (sample_id)

Continued on next page

Table 2.4.1 – concluded from previous page

Name	Type	Need	Description / Values
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_analysis_id	string[] (array seps ,)	D	Unique identifier for the analysis performed for a particular set of samples Relates to Protein-DNA interactions - Metadata File (analysis_id)
control_sample_id	string	D	Unique identifier for the sample assigned by data provider Relates to Analyzed Sample Data File (sample_id)
data_status	integer	R	The status of the analysis over the associated raw data 0 = Raw data available at the EGA, but not more 1 = Raw data available at the EGA, analysis in process 2 = Analysis results obtained (analysis finished)
experimental_group_id	string	R	Identifier of the experimental group who did the experimental analysis (See CV A.5)
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
program_versions	compound[] <i>program:version</i> (array seps ;)	D	The versions of (some of) the programs used for the analysis
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.4.2 Protein-DNA interactions - Primary Analysis File

Protein-DNA [pdna] – Primary Analysis File [p]

Table 2.4.2: Protein-DNA interactions - Primary Analysis File

Name	Type	Need	Description / Values
<i>Continued on next page</i>			

Table 2.4.2 – concluded from previous page

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples Relates to Protein-DNA interactions - Metadata File (analysis_id)
protein_dna_interaction_id	string	I	Unique identifier for the protein-DNA interaction
chromosome	string	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
idr	decimal	D	Irreproducible discovery rate
log10_pvalue	decimal	R	-log10(p-value)
log10_qvalue	decimal	D	-log10(q-value) , which available for peaks, but not for broad peaks
note	string	0	Optional field to leave notes
protein_stable_id	string	R	Stable id of the interacting protein, antibody or protein complex
rank	compound[] <i>rank:value</i> (array seps ;)	0	Kind of used ranking and its value, in the form "rank;value". As it can hold more than one value, they are separated by bars
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.4.3 Protein-DNA interactions – Secondary Analysis File

Protein-DNA [pdna] – Secondary Analysis File [s]

Table 2.4.3: Protein-DNA interactions – Secondary Analysis File

Table 2.5.1 – continued from previous page

Name	Type	Need	Description / Values
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
analysis_group_id	string	R	Identifier of the analysis group (i.e. the one who prepared/run the pipeline) (See CV A.5)
analyzed_sample_id	string	R	<i>Unique identifier</i> for the sample assigned by data provider Relates to Analyzed Sample Data File (sample_id)
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_analysis_id	string[] (array seps ,)	D	Unique identifier for the analysis performed for a particular set of samples Relates to Regulatory regions - Metadata File (analysis_id)
chromosome	string	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
control_sample_id	string	D	<i>Unique identifier</i> for the sample assigned by data provider Relates to Analyzed Sample Data File (sample_id)
data_status	integer	R	The status of the analysis over the associated raw data 0 = Raw data available at the EGA, but not more 1 = Raw data available at the EGA, analysis in process 2 = Analysis results obtained (analysis finished)

Continued on next page

Table 2.5.1 – concluded from previous page

Name	Type	Need	Description / Values
experimental_group_id	string	R	Identifier of the experimental group who did the experimental analysis (See CV A.5)
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
program_versions	compound[] <i>program:version</i> (array seps ;)	D	The versions of (some of) the programs used for the analysis
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.5.2 Regulatory regions – Primary Analysis File

Regulatory regions [rreg] – Primary Analysis File [p]

Table 2.5.2: Regulatory regions – Primary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples Relates to Regulatory regions – Metadata File (analysis_id)
regulatory_region_id	string	I	Unique identifier for the identified regulatory region
normalized_read_count	decimal	R	Normalized count of sequencing reads if analyzed by sequencing platforms
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the mutation/variation call

Continued on next page

Table 2.5.2 – concluded from previous page

Name	Type	Need	Description / Values
quality_score	decimal	0	Average quality score for the mutation/variation call
raw_read_count	integer	R	Raw count of sequencing reads if analyzed by sequencing platforms
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.5.3 Regulatory regions – Secondary Analysis File

Regulatory regions [rreg] – Secondary Analysis File [s]

Table 2.5.3: Regulatory regions – Secondary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	R	Unique identifier for the analysis performed for a particular set of samples Relates to Regulatory regions – Primary Analysis File (analysis_id)
ensembl_version	integer	R	Version of Ensembl gene build used for annotation (or the version of Ensembl gene build integrated into used GENCODE build)
gene_affected	string[] (array seps)	R	Gene affected. Use Ensembl gene id, separated by when there is more than one. If no gene is affected, don't put an entry (See external CV description A.1)
note	string	0	Optional field to leave notes
regulatory_region_id	string	R	Unique identifier for the identified regulatory region Relates to Regulatory regions – Primary Analysis File (regulatory_region_id)

2.6 DNA *-lation (Methylation, Hydroxy-Methylation, Formylation, etc...)

2.6.1 DNA *-lation – Metadata File

DNA *-lation [dlat] – Metadata File [m]

Table 2.6.1: DNA *-lation – Metadata File

Name	Type	Need	Description / Values

Figure 2.7: Cytosine, CpG and HMR explanation

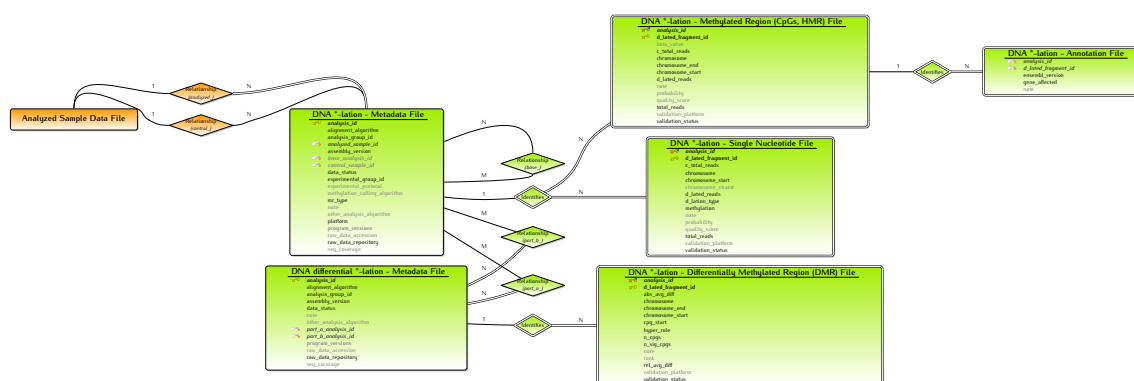

Figure 2.8: DNA *-lation (Methylation, Hydroxy-Methylation, Formylation, etc...) Sub-Schema

Table 2.6.1 – continued from previous page

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
alignment_algorithm	compound name;url	R	Name of alignment algorithm and URL to written protocol
analysis_group_id	string	R	Identifier of the analysis group (i.e. the one who prepared/run the pipeline) (See CV A.5)
analyzed_sample_id	string	R	Unique identifier for the sample assigned by data provider Relates to <i>Analyzed Sample Data File (sample_id)</i>

Continued on next page

Table 2.6.1 – continued from previous page

Name	Type	Need	Description / Values
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_analysis_id	string[] (array seps ,)	D	Unique identifier for the analysis performed for a particular set of samples Relates to DNA *-lation - Metadata File (analysis_id)
control_sample_id	string	D	<i>Unique identifier</i> for the sample assigned by data provider Relates to Analyzed Sample Data File (sample_id)
data_status	integer	R	The status of the analysis over the associated raw data 0 = Raw data available at the EGA, but not more 1 = Raw data available at the EGA, analysis in process 2 = Analysis results obtained (analysis finished)
experimental_group_id	string	R	Identifier of the experimental group who did the experimental analysis (See CV A.5)
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
methylation_calling_algorithm	compound <i>name;url</i>	0	Name of variation calling algorithm and URL to written protocol
mr_type	string	R	The type of methylated region site c = Single nucleotide *-lation cpg = CpG dinucleotide hyper = Hyper-methylated region hypo = Hypo-methylated region
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
program_versions	compound[] <i>program:version</i> (array seps ;)	D	The versions of (some of) the programs used for the analysis
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
Continued on next page			

Table 2.6.1 – concluded from previous page

Name	Type	Need	Description / Values
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.6.2 DNA *-lotion – Single Nucleotide File

DNA *-lotion [dlat] – Single Nucleotide File [n]

Table 2.6.2: DNA *-lotion – Single Nucleotide File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples Relates to DNA *-lotion – Metadata File (analysis_id)
d_lated_fragment_id	string	I	Unique identifier for the methylated fragment, in the form d*lotionType chromosome_chromosomeStart_chromosomeEnd
c_total_reads	decimal	R	Reads which has identified this position as a cytosine
chromosome	string	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
d_lated_reads	decimal	R	Reads which has identified this position as a DNA *-lated cytosine
d_lotion_type	string	R	Type of DNA *-lotion (Methylation, Hydroxy-Methylation, Formylation, etc...) m = Methylation (cytosine) hm = Hydroxy-Methylation (cytosine) hmU = Hydroxy-Methylation (uracil) f = Formylation (cytosine) ca = Carboxylation (cytosine)

Continued on next page

Table 2.6.2 – concluded from previous page

Name	Type	Need	Description / Values
methylation	decimal	R	DNA *-lotion beta value (or average methylation) for interrogated site
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the DNA *-lotion call
quality_score	decimal	0	Quality score for the DNA *-lotion call
total_reads	decimal	R	Total number of reads over this position/segment, either identifying or not a cytosine, for sequencing platforms. Mean reads depth for other technologies
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.6.3 DNA *-lotion – Methylated Region (CpGs, HMR) File

DNA *-lotion [dlat] – Methylated Region File [mr] for CpGs and hypo/hyper-methylated regions

Table 2.6.3: DNA *-lotion – Methylated Region (CpGs, HMR) File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples Relates to DNA *-lotion – Metadata File (analysis_id)
d_lated_fragment_id	string	I	Unique identifier for the methylated fragment, in the form d'*lotionType chromosome_chromosomeStart_chromosomeEnd
beta_value	decimal	0	DNA *-lotion beta value (or average methylation or) for interrogated site
c_total_reads	decimal	R	Reads which has identified this position as a cytosine
chromosome	string	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)

Continued on next page

Table 2.6.3 – concluded from previous page

Name	Type	Need	Description / Values
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
d_lated_reads	decimal	R	Reads which has identified this position as a DNA *lated cytosine
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the DNA *-lation call
quality_score	decimal	0	Quality score for the DNA *-lation call
total_reads	decimal	R	Total number of reads over this position/segment, either identifying or not a cytosine, for sequencing platforms. Mean reads depth for other technologies
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.6.4 DNA *-lation – Annotation File

DNA *-lation [dlat] – Annotation File [s]

Table 2.6.4: DNA *-lation – Annotation File

Name	Type	Need	Description / Values
analysis_id	string	R	Unique identifier for the analysis performed for a particular set of samples Relates to DNA *-lation – Methylated Region (CpGs, HMR) File (analysis_id)
d_lated_fragment_id	string	R	Unique identifier for the methylated fragment, in the form d*-lationType chromosome_chromosomeStart_chromosomeEnd Relates to DNA *-lation – Methylated Region (CpGs, HMR) File (d_lated_fragment_id)

Continued on next page

Table 2.6.4 – concluded from previous page

Name	Type	Need	Description / Values
ensembl_version	integer	R	Version of Ensembl gene build used for annotation (or the version of Ensembl gene build integrated into used GENCODE build)
gene_affected	string[] (array seps)	R	Gene affected. Use Ensembl gene id, separated by when there is more than one. If no gene is affected, don't put an entry (See external CV description A.1)
note	string	0	Optional field to leave notes

2.6.5 DNA differential *-lation – Metadata File

DNA differential *-lation [dlat] – Metadata File [dm]

Table 2.6.5: DNA differential *-lation – Metadata File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
analysis_group_id	string	R	Identifier of the analysis group (i.e. the one who prepared/run the pipeline) (See CV A.5)
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
data_status	integer	R	The status of the analysis over the associated raw data 0 = Raw data available at the EGA, but not more 1 = Raw data available at the EGA, analysis in process 2 = Analysis results obtained (analysis finished)
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
part_a_analysis_id	string[] (array seps ,)	R	Unique identifier for the analysis performed for a particular set of samples Relates to DNA *-lation – Metadata File (analysis_id)

Continued on next page

Table 2.6.5 – concluded from previous page

Name	Type	Need	Description / Values
part_b_analysis_id	string[] (array seps ,)	R	Unique identifier for the analysis performed for a particular set of samples Relates to DNA *-lotion - Metadata File (analysis_id)
program_versions	compound[] <i>program:version</i> (array seps ;)	D	The versions of (some of) the programs used for the analysis
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.6.6 DNA *-lotion - Differentially Methylated Region (DMR) File

DNA *-lotion [dlat] - Differentially Methylated Region File [dmr]

Table 2.6.6: DNA *-lotion - Differentially Methylated Region (DMR) File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples Relates to DNA differential *-lotion - Metadata File (analysis_id)
d_lated_fragment_id	string	I	Unique identifier for the methylated fragment, in the form d*lotionType chromosome_chromosomeStart_chromosomeEnd
abs_avg_diff	decimal	R	Average of absolute methylation difference for the DMR
chromosome	string	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome

Continued on next page

Table 2.6.6 – concluded from previous page

Name	Type	Need	Description / Values
cpg_start	integer[] (array seps ,)	R	The coordinates of the CpGs used for the calculation of this differentially methylated region
hyper_role	string	R	Which participant had the hypermethylation role in the comparison? A = The hyper methylation role was given to participant A B = The hyper methylation role was given to participant B
n_cpgs	integer	R	Number of CpGs in the DMR
n_sig_cpgs	integer	R	Number of significant CpGs in the DMR (z_score > 3 or < -3)
note	string	0	Optional field to leave notes
rank	compound[] rank:value (array seps ;)	0	Kind of used ranking and its value, in the form "rank;value". As it can hold more than one value, they are separated by bars
rel_avg_diff	decimal	R	Average of relative methylation difference for the DMR
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

Controlled Vocabularies

A.1 Ensembl Genes

Valid Ensembl Genes identifiers

(See it at http://jan2013.archive.ensembl.org/Homo_sapiens/Info/Index)

A.2 Ensembl Transcripts

Valid Ensembl Transcript identifiers

(See it at http://jan2013.archive.ensembl.org/Homo_sapiens/Info/Index)

A.3 Cell Ontology

The Cell Ontology is designed as a structured controlled vocabulary for cell types \$Revision: 1.113 \$
See PMID:15693950, PMID:12799354, PMID:20123131, PMID:21208450; Contact Alexander Diehl, ad-diehl@buffalo.edu, University at Buffalo.

(See it at <http://cellontology.org/>)

A.4 ISO 3166-1, ISO 3166-2 and UN M.49

ISO 3166 is the International Standard for country codes and codes for their subdivisions. The purpose of ISO 3166 is to establish internationally recognised codes for the representation of names of countries, territories or areas of geographical interest, and their subdivisions. A complementary classification, related to ISO 3166 is UN M.49 (Standard Country and Area Codes Classifications

(See them at http://www.iso.org/iso/country_codes.htm, http://en.wikipedia.org/wiki/ISO_3166-2, <http://unstats.un.org/unsd/methods/m49/m49.htm>, <http://unstats.un.org/unsd/methods/m49/m49regin.htm> and <http://unstats.un.org/unsd/methods/m49/m49alpha.htm>)

Table A.4.1: ISO 3166-1, ISO 3166-2 and UN M.49 aliases

Alias	Key	Description
ALIAS:EAL	GB-CAM GB-ESS GB-HRT GB-NFK GB-SFK	East Anglia: United Kingdom region composed of the administrative counties of Norfolk to the north, Suffolk to the south, Cambridgeshire and Essex to the west.

Key	Platform or Validation Platform
15	Agilent Human Genome 244A
16	Agilent Human Genome 105A
17	Agilent Human CNV Association 2x105K
18	Agilent Human Genome 44K
19	Agilent Human CGH 1x1M
20	Agilent Human CGH 2x400K
21	Agilent Human CGH 4x180K
22	Agilent Human CGH 8x60K
23	Agilent Human CNV 2x400K
24	Agilent Human miRNA Microarray Kit (v2)
25	Agilent Human CpG Island Microarray Kit
26	Agilent Human Promoter ChIP-on-chip Microarray Set
27	Agilent Human SpliceArray
28	Illumina human1m-duo
29	Illumina human660w-quad
30	Illumina humancytosnp-12
31	Illumina human510s-duo
32	Illumina humanmethylation27
33	Illumina goldengate methylation
34	Illumina HumanHT-12 v4.0 beadchip
35	Illumina HumanWG-6 v3.0 beadchip
36	Illumina HumanRef-8 v3.0 beadchip
37	Illumina microRNA Expression Profiling Panel
38	Illumina humanht-16
39	Illumina humanht-17
40	Nimblegen Human CGH 3x720 Whole-Genome v3.0 Array
41	Nimblegen Human CGH 2.1M Whole-Genome v2.0D Array
42	Nimblegen Gene Expression 385K
43	Nimblegen Gene Expression 4x72K
44	Nimblegen Gene Expression 12x135K
45	Nimblegen Human Methylation 2.1M Whole-Genome sets
46	Nimblegen Human Methylation 385K Whole-Genome sets
47	Nimblegen CGS
48	Illumina Human1M OmniQuad chip
49	PCR and capillary sequencing
50	Custom-designed gene expression array
51	Affymetrix HT Human Genome U133A Array Plate Set
52	Agilent 244K Custom Gene Expression G4502A-07-1
