Chapter 1

Data Submission

1.1 Overview of Data Submission Process

There are four major steps in the data submission process:

1. Submit raw sequence data to the European Genome-phenome Archive
2. Prepare the BLUEPRINT submission files according to DCC data format specifications
3. Verify conformity of the submission files
4. Submit files to the DCC Secure FTP server

All submitted data must be based on **Human reference genome assembly GRCh37** and **Ensembl gene set version 68**

When submitting experimental data, please make sure you've already deposited your raw data to the appropriate public data repositories (eg: sequencing reads to EBI EGA) and then populate in your submission files the data elements **raw_data_repository** and **raw_data_accession** with the correct repository and accession number respectively.

1.2 Preparing Clinical Data and Analyzed Contents for their submission

Submitted clinical or experimental data files must be from any one of these categories:

- [Clinical data](#)
- [Copy Number Variations](#)
- [Gene Expression](#)
- [Exon Junctions](#)
- [DNA *-lation \(Methylation, Hydroxy-Methylation, Formylation, etc...\)](#)
- [Protein-DNA interactions](#)
- [Regulatory regions](#)

BLUEPRINT DCC is hosting both clinical data and analyzed contents. Contents must be sent following the textual tabular formats defined below. Files with those contents must also follow the BLUEPRINT DCC file naming convention.

Each submitter must have a unique signing key, provided by DACO and DCC. Each file in a submitted archive must be accompanied by its SHA1 **uncompressed** content digest file, digitally signed with the submitter's signing key.

Signed digest generation and verification using OpenSSL

```
# Signed digest of uncompressed contents, will be dlat-p--001-20120920--mycode.txt.sha1
openssl dgst -sha1 -sign subKey.pem -out dlat-p--001-20120920--mycode.txt.sha1 \
    dlat-p--001-20120920--mycode.txt

# Signed digest of already compressed contents
bunzip2 -c dlat-p--001-20120920--mycode.txt.bz2 | openssl dgst -sha1 -sign subKey.pem \
    -out dlat-p--001-20120920--mycode.txt.sha1

# Verification of uncompressed contents using
# signed digest dlat-p--001-20120920--mycode.txt.sha1
openssl dgst -sha1 -verify subKey.pem.pub -signature dlat-p--001-20120920--mycode.txt.sha1 \
    dlat-p--001-20120920--mycode.txt

# Verification of compressed contents
bunzip2 -c dlat-p--001-20120920--mycode.txt.bz2 | openssl dgst -sha1 -verify subKey.pem.pub \
    -signature dlat-p--001-20120920--mycode.txt.sha1
```

The procedure to submit analyzed contents to BLUEPRINT DCC also involves first having the raw data used for the analysis in the [European Genome-phenome Archive \(EGA\)](#), as all the metadata entries from the analyzed contents to be stored in BLUEPRINT DCC **must point** to the original raw data.

1.2.1 File Naming Conventions

Submitted files, containing either clinical data or analyzed experiment contents, must follow next file naming convention

```
featureType-fileType--institutionCode-dateFileCreated--freeField.txt
```

```
featureType-fileType--institutionCode-dateFileCreated--freeField.txt.sha1
```

The file name components are mapped in the next way:

Components	Description	Key
<i>featureType</i>	Clinical data Copy Number Variations Gene Expression Exon Junctions DNA *-lation (Methylation, Hydroxy-Methylation, Formylation, etc...) Protein-DNA interactions Regulatory regions	cdata cngv exp jcn dlat pdna rreg
<i>fileType</i>	Metadata file Primary data file Secondary data file Gene expression file Donor file Specimen file Sample file Donor's Family file	m p s g donor specimen sample family
<i>institutionCode</i>	Institution submitting data	CV Table A.5.1
<i>dateFileCreated</i>	The date on which the file is created	YYYYMMDD (ISO-8601)
<i>freeField</i>	An alphanumeric field (max length of 16 characters) where submitters can put internal codes, file sequence numbers, etc...	e.g.: <i>mysample</i> , <i>0B1845J</i>

Different file types of the same feature type are interrelated, because the data they are storing is intertwined. Specific relations are defined on the documentation of each feature type and their file types. For instance, information stored in a primary data file is related and depends on the data from its corresponding metadata file, and the same happens to secondary data files and primary data files. Metadata file contents are related to clinical data sample files.

1.2.2 Tabular File Structure

The submitted analyzed contents are kept in tab-delimited text files. General comments may be added to the beginning of the file with a hash ('#') prefixed at beginning of each comment line. The first non-comment line is the header containing the names of the columns. Each column corresponds to a data element defined in DCC Submission Tabular Formats specification ([Chapter 2](#)).

There is a subset of comment lines used to attach data labels to the text files. These data labels follow the form '#labelName value [value ...]'. Currently acknowledged data labels are:

- **format:** This label is **required**, and its value defines the BLUEPRINT data formatting schema used on the file.
- **depends:** Although this label is not always required, it is important to validate the data coherence of the whole data set, because it ensures related data is not corrupted. The values of this label are the file on the same submission this file is related to (for instance, the name of a metadata file), and the SHA1 digest value (in its hexadecimal representation) of that file's contents.

There are several ways to generate the SHA1 digest of a file, like libraries in most of the programming languages and command-line tools:

SHA1 digest generation

```
# Getting the SHA1 digest value of uncompressed contents using OpenSSL
openssl dgst -sha1 dlat-p--001-20120920--mycode.txt

SHA1(dlat-p--001-20120920--mycode.txt)= 81ae49a7014d2d0260625d3535fa6e2a4a0bc06f

# Getting the SHA1 digest value of uncompressed contents using shasum
shasum dlat-p--001-20120920--mycode.txt

81ae49a7014d2d0260625d3535fa6e2a4a0bc06f  dlat-p--001-20120920--mycode.txt
```

An example file is shown below (note that parts of the lines are omitted for readability):

dlat-p--001-20120920--mycode.txt

```
# This is an example of a primary analysis file for simple somatic mutations.
# File name: dlat-p--001-20120920--mycode.txt
#
# And it has its labels
##format 0.2.2-f167d4a4c2d8e82b716693dd35ee9986a24ba4fe

```

All the declared columns for each file type must be set. Data columns are labeled as identifier or reference (I), required (R), desirable (D) or optional (O). Data providers (i.e. submitters) must put all the efforts in order to provide values for the idref and required data columns. The exception for this rule are the desirable fields, required fields which can be unknown on the first submissions, but in that case the fields these exceptions are properly documented.

There are several possible reasons why a column value (either desirable or optional) has not been provided. Next reserved codes must be used to describe the reason:

Code	Meaning
#FF#	Data not supplied at this time (<i>for future fill</i>)
#NA#	Not applicable for the context of the surrounding knowledge
#VO#	Data verified to be unknown (void, undef, null)
#DE#	Data derived from a required or idref field

Some data columns described in this submission manual contain values used as identifiers on BLUEPRINT DCC (e.g. `analysis_id`, `regulatory_region_id`, ...). As such, these identifiers should uniquely identify the entity they are referring (an analysis, a regulatory region, ...), and the identifier's value should be globally unique within a center's data submission. Also, these identifiers should be consistent along the different data submissions and releases. If you have to generate your own identifiers, there are some general recommendations, like using the same prefix for the identifiers of the same kind.

When you are submitting string values for columns which can contain URLs or multiple values delimited by commas, each separate value string, before being joined, should be **URI encoded**.

1.3 File Submission Procedure

Files with the contents to be submitted, along with their corresponding signed digest, must be sent in a single **tar** archive. Either the tar archive or its embedded contents should be submitted compressed, using **gzip**, **bzip2** or **xz** formats.

The following steps are involved in submitting your project's data files to DCC:

1. Contact xxx and notify the DCC of your intent to submit data.
2. The DCC will provide an SFTP or Aspera account for uploading your data to the DCC's secure server xxx.
3. Prepare an archive containing the set of data files (along with their signed digests) comprising your submission.
4. Generate a signed digest of the archive your are going to upload, which is also going to be uploaded.
5. Login into your SFTP or Aspera account and upload both the data archive and its signed digest.
6. Notify the DCC of your successful upload, so they can start the internal validation and processing.

To be finished/defined

Chapter 2

DCC Submission Tabular Formats

2.1 Clinical Data Submission File Specifications

Overview

There are three **required** clinical and tissue annotation submission files, and one **optional** template files:

Figure 2.1: Clinical Data Sub-Schema

Core Clinical Data Files

1. Donor Data File (donor)

Mandatory information about the donor's age, gender and vital status.

2. Specimen Data File (specimen)

Mandatory information about a specimen that was obtained from a donor. There may be several specimens per donor that were obtained concurrently or at different times.

3. Analyzed Sample Data File (sample)

Mandatory information about an analyzed sample that was subjected to molecular analysis. There may be several analyzed samples per specimen, for example, when a tumour is used to derive xenografts and cell lines.

All data submissions to the DCC **must include the three core clinical data files.**

Optional Template Files

1. Donor Family History (family)

Optional details about family history of the donor

Coding of donor IDs

The three mandatory data files contain donor, specimen and analyzed sample IDs, respectively. These IDs are to be coded specifically for BLUEPRINT purposes and only the submitting group will keep the key that will permit to link back the data to the individual donors. The key must not be communicated to the data users. It should not be derived from other IDs such as biobank or hospital identifiers. These IDs are to be coded in such a way that they cannot be tracked back to the individual donors, except by the submitting group. IDs are assigned by each submitting group, and must be unique within all the data submitted by that group (i.e. no duplicate IDs allowed). The DCC will prevent collisions between similar IDs submitted by different groups by including the project source column by default in all BioMart queries.

2.1.1 Donor Data File

Donor Data File [donor] (required)

This submission file describes a donor from which one or more specimens were obtained.

Table 2.1.1: Donor Data File

Name	Type	Need	Description / Values
donor_id	string	I	Unique identifier for the donor; assigned by data provider.
donor_region_of_residence	string[] (array seps ,)	R	Country, and optionally state or province code, but not city. <i>ISO3166-1-alpha-2 or ISO3166-2 codes, eg: "CA" or "CA-ON" (See external CV description A.4)</i>
donor_sex	integer	D	Donor biological sex. <i>"Other" has been removed from the controlled vocabulary due to identifiability concerns.</i> 1 = male 2 = female
notes	string	0	Any additional non-identifying information can be included here.

2.1.2 Donor Family History

Donor Family History [family] (optional)

This file describes the family history of the donor.

Table 2.1.2: Donor Family History

Name	Type	Need	Description / Values
donor_id	string	I	Unique identifier for the donor; assigned by data provider.
<i>Continued on next page</i>			

Table 2.1.2 – concluded from previous page

Name	Type	Need	Description / Values
notes	string	0	Any additional non-identifying information can be included here.
relationship_age	integer	R	Age of relative at primary diagnosis (years) <i>Use 90 for ages ≥ 90 years.</i>
relationship_diagnosis	string	R	Diagnosis (disease or healthy status) <i>e.g. "breast cancer"</i>
relationship_diagnosis_do	string	R	Disease Ontology code for the relative's diagnosis status
relationship_sex	integer	R	Biological sex of related individual 1 = male 2 = female
relationship_type	integer	R	Relationship to the donor 1 = sibling 2 = parent 3 = grandparent 4 = uncle/aunt 5 = cousin 6 = other
relationship_type_other	string	R	If "other" answered in previous column, specify the relationship type here

2.1.3 Specimen Data File

Specimen Data File [specimen] (required)

This submission file describes a specimen from which one or more samples were derived. Use additional rows for more than one specimen from the same patient. If more than one specimen was extracted during the same procedure, each gets a distinct ID.

Table 2.1.3: Specimen Data File

Name	Type	Need	Description / Values
specimen_id	string	I	Unique identifier for the specimen assigned by data provider.
donor_id	string	I	Unique identifier for the donor; assigned by data provider.
donor_max_age_at_specimen_acquisition	duration	D	Donor max age when the specimen was acquired. If it is '#DE#', then it is the same value as "donor_min_age_at_specimen_acquisition"
<i>Continued on next page</i>			

Table 2.1.3 – continued from previous page

Name	Type	Need	Description / Values
donor_min_age_at_specimen_acquisition	duration	R	Donor minimal age when the specimen was acquired, in ISO-8601 duration (basic format)
notes	string	0	Any additional non-identifying information can be included here.
specimen_available	boolean	0	Whether additional tissue is available for followup studies.
specimen_biobank	string	0	If the specimen was obtained from a biobank, provide the biobank name here
specimen_biobank_id	string	0	If the specimen was obtained from a biobank, provide the biobank accession number here.
specimen_processing	string	R	Description of technique used to process specimen 1 = cryopreservation in liquid nitrogen (dead tissue) 2 = cryopreservation in dry ice (dead tissue) 3 = cryopreservation of live cells in liquid nitrogen 4 = cryopreservation, other 5 = formalin fixed, unbuffered 6 = formalin fixed, buffered 7 = formalin fixed & paraffin embedded 8 = fresh 9 = other technique
specimen_processing_other	string	0	If "other" specified for specimen_processing, may indicate technique here.
specimen_storage	string	R	Description of how specimen was stored. For specimens that were extracted freshly or immediately cultured, answer (1) "NA". 1 = frozen, liquid nitrogen 2 = frozen, -70 freezer 3 = frozen, vapor phase 4 = RNA later frozen 5 = paraffin block 6 = cut slide 7 = other

Continued on next page

Table 2.1.3 – concluded from previous page

Name	Type	Need	Description / Values
specimen_storage_other	string	0	If "other" specified for specimen_storage, may indicate technique here.
specimen_type	integer	R	Controlled vocabulary description of specimen type. 1 = primary tumour 2 = tumour local recurrence 3 = tumour metastasis to local lymph node 4 = tumour metastasis to distant location 5 = peripheral blood 6 = bone marrow 7 = lymph node 8 = normal control (tissue adjacent to primary) 9 = normal control (blood) 10 = normal control (other) 11 = disease tissue (other) 12 = cord blood
specimen_type_other	string	0	Free text description of site of specimen if "normal control (other)" or "disease tissue (other)" was specified in specimen_type field.

2.1.4 Analyzed Sample Data File

Analyzed Sample Data File [sample] (required)

This submission file describes an analyzed sample on which molecular characterization was performed. It includes both control samples and tumour samples.

Table 2.1.4: Analyzed Sample Data File

Name	Type	Need	Description / Values
analyzed_sample_id	string	I	Unique identifier for the sample assigned by data provider
specimen_id	string	I	Unique identifier for the specimen assigned by data provider.
analyzed_sample_interval	integer	0	Interval from specimen acquisition to sample use in an analytic procedure (e.g. DNA extraction), in days
analyzed_sample_type	integer	R	Controlled vocabulary description of sample type 1 = Normal blood 2 = Leukemic blood 3 = Normal control adjacent to primary 4 = Normal control from non-tumour site 5 = Control from cell line derived from normal tissue 6 = Normal mouse host 7 = Primary tumour 8 = Mouse xenograft derived from tumour 9 = Cell line derived from tumour 10 = Cell line derived from xenograft 11 = Other (specify)
analyzed_sample_type_other	string	0	Free text description of site of sample if "other" was specified in sample_type field
notes	string	0	Any additional non-identifying information can be included here.
purified_cell_type	string	R	Purified cell type for the sample (See external CV description A.3)

2.2 Copy Number Germline Variations

Figure 2.2: Copy Number Germline Variations Sub-Schema

2.2.1 Copy Number Germline Variations - Metadata File

Copy Number Germline Variations [cngv] – Metadata File [m]

Table 2.2.1: Copy Number Germline Variations – Metadata File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_calling_algorithm	compound <i>name;url</i>	R	Name of base calling algorithm and URL to written protocol
control_sample_id	string	R	Unique identifier for the analyzed control/matched sample
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms
variation_calling_algorithm	compound <i>name;url</i>	R	Name of variation calling algorithm and URL to written protocol

2.2.2 Copy Number Germline Variations – Primary Analysis File

Copy Number Germline Variations [cngv] – Primary Analysis File [p]

Table 2.2.2: Copy Number Germline Variations – Primary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
<i>Continued on next page</i>			

Table 2.2.2 – continued from previous page

Name	Type	Need	Description / Values
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
variation_id	string	I	Unique identifier for the variation
chromosome	integer	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_end_range	integer	R	Number of bases around chromosome_end that may contain the end position <i>0 if end position is exactly at chromosome_end; positive integer for +/- number of bases around chromosome_end</i>
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_start_range	integer	R	Number of bases around chromosome_start that may contain the start position <i>0 if start position is exactly at chromosome_start; positive integer for +/- number of bases around chromosome_start</i>
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
copy_number	decimal	0	DNA copy number estimated
end_probe_id	string	0	Probe id containing the chromosome_end (if array platform was used)
is_annotated	boolean	0	Indicate if the variation is annotated in the database of Genomic Variations
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the mutation/variation call
quality_score	decimal	0	Average quality score for the mutation/variation call
segment_mean	decimal	0	Mean LRR per segment
segment_median	decimal	0	Median LRR per segment
Continued on next page			

Table 2.2.2 – concluded from previous page

Name	Type	Need	Description / Values
start_probe_id	string	0	Probe id containing the chromosome_start (if array platform was used)
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated
variation_type	string	R	Type of variation 1 = gain 2 = loss 3 = copy neutral LOH 4 = copy neutral 5 = hemizigous del LOH 6 = apm LOH

2.3 Gene Expression

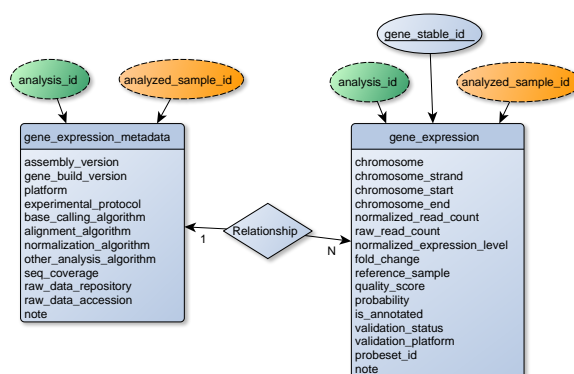

Figure 2.3: Gene Expression Sub-Schema

2.3.1 Expression - Metadata File

Expression [exp] – Metadata File [m]

Table 2.3.1: Expression – Metadata File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples

Continued on next page

Table 2.3.1 – concluded from previous page

Name	Type	Need	Description / Values
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_calling_algorithm	compound <i>name;url</i>	R	Name of base calling algorithm and URL to written protocol
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.3.2 Expression – Gene File

Expression [exp] – Gene File [g]

Table 2.3.2: Expression – Gene File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
gene_stable_id	string	I	For annotated gene, use Ensembl gene ID. Otherwise, use assemblyBuild_chr_start_end where assemblyBuild is hg18 or hg19.
<i>Continued on next page</i>			

Table 2.3.2 – continued from previous page

Name	Type	Need	Description / Values
chromosome	integer	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
fold_change	decimal	0	Expressed fold change if differential expression is measured
is_annotated	boolean	R	Indicate if the expressed fragment is annotated in Ensembl
normalized_expression_level	decimal	0	Normalized value of expression level if analyzed by microarray platforms
normalized_read_count	decimal	R	Normalized count of sequencing reads if analyzed by sequencing platforms
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the mutation/variation call
probeset_id	string	0	ID of the probeset used in microarray if analyzed by microarray platform
quality_score	decimal	0	Average quality score for the mutation/variation call
raw_read_count	integer	R	Raw count of sequencing reads if analyzed by sequencing platforms
reference_sample	string	0	ID of the reference analyzed sample if differential expression is measured
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

Table 2.4.1 – concluded from previous page

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_calling_algorithm	compound <i>name;url</i>	R	Name of base calling algorithm and URL to written protocol
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.4.2 Exon Junction - Primary Analysis File

Exon Junction [jcn] – Primary Analysis File [p]

Table 2.4.2: Exon Junction - Primary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
junction_id	string	I	For known exons, use exonID1_exonID2 where exonID1 and exonID2 are Ensembl IDs of the 5' and 3' exons, respectively. For novel or putative exons, use assembly-Build_exon1chr_exon1end_exon2chr_exon2start where assemblyBuild is hg18 or hg19; exon1chr and exon2chr are the chromosomes of the 5' and 3' exons, respectively; exon1end is the end position of the 5' exon; exon2start is the start position of the 3' exon.
chromosome	integer	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
exon1_chromosome	integer	R	Name of the chromosome containing the 5' exon (#) (See CV A.7)
exon1_end	integer	R	End position of the 5' exon on the chromosome
exon1_number_bases	integer	R	Number of bases from 5' exon
exon1_strand	integer	0	Chromosome strand of the 5' exon -1 = Reverse strand 1 = Forward strand
exon2_chromosome	integer	R	Name of the chromosome containing the 3' exon (#) (See CV A.7)
exon2_number_bases	integer	R	Number of bases from 3' exon
exon2_start	integer	R	Start position of the 3' exon on the chromosome
exon2_strand	integer	0	Chromosome strand of the 3' exon -1 = Reverse strand 1 = Forward strand

Continued on next page

Table 2.4.2 – concluded from previous page

Name	Type	Need	Description / Values
gene1_stable_id	string	R	Stable ID of the gene containing the 5' exon at the junction. For annotated gene, use Ensembl gene ID. For putative and novel gene, use assemblyBuild_chr_start_end where assemblyBuild can be hg18 or hg19.
gene2_stable_id	string	0	In the case of a fusion gene, provide the Stable ID of the gene containing the 3' exon at the junction. For annotated genes, use Ensembl gene ID. For putative and novel genes, use assemblyBuild_chr_start_end where assemblyBuild can be hg18 or hg19.
is_fusion_gene	boolean	0	Indicate if the function is the result of a fusion gene
is_novel_splice_form	boolean	0	Indicate if the splice form is novel
junction_read_count	integer	R	Count of sequencing reads that span across exons
junction_seq	string	0	Provide junction sequence if either is_fusion_gene or is_novel_splice_form is true
junction_type	integer	0	Type of junction 1 = Canonical 2 = Non-canonical 3 = U12
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the mutation/variation call
quality_score	decimal	0	Average quality score for the mutation/variation call
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.5 Protein-DNA interactions

2.5.1 Protein-DNA interaction - Metadata File

Protein-DNA [pdna] – Metadata File [m]

Table 2.5.1: Protein-DNA interaction - Metadata File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
<i>Continued on next page</i>			

Figure 2.6: Protein-DNA interactions Sub-Schema

Table 2.5.1 – continued from previous page

Name	Type	Need	Description / Values
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
NSC	decimal	0	Normalized strand-cross correlation of the analysis
RSC	decimal	0	Relative strand-cross correlation of the analysis
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_calling_algorithm	compound <i>name;url</i>	R	Name of base calling algorithm and URL to written protocol
control_sample_id	string	R	Unique identifier for the analyzed control/matched sample
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository

Continued on next page

Table 2.5.1 – concluded from previous page

Name	Type	Need	Description / Values
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.5.2 Protein-DNA interaction - Primary Analysis File

Protein-DNA [pdna] – Primary Analysis File [p]

Table 2.5.2: Protein-DNA interaction - Primary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
protein_dna_interaction_id	string	I	Unique identifier for the protein-DNA interaction
chromosome	integer	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
fdr	decimal	R	False discovery rate
idr	decimal	R	Irreproducible discovery rate
note	string	0	Optional field to leave notes
protein_stable_id	string	R	Stable id of the interacting protein, antibody or protein complex
rank	compound[] <i>rank;value</i> (array seps)	0	Kind of used ranking and its value, in the form "rank;value". As it can hold more than one value, they are separated by bars

Continued on next page

Table 2.5.2 – concluded from previous page

Name	Type	Need	Description / Values
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.5.3 Protein-DNA interaction - Secondary Analysis File

Protein-DNA [pdna] – Secondary Analysis File [s]

Table 2.5.3: Protein-DNA interaction - Secondary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
ensembl_version	integer	R	Version of Ensembl gene build used for annotation
gene_affected	string[] (array seps)	R	Gene affected. Use Ensembl gene id, separated by when there is more than one. If no gene is affected, don't put an entry (See external CV description A.1)
note	string	0	Optional field to leave notes
protein_dna_interaction_id	string	I	Unique identifier for the protein-DNA interaction
transcript_affected	string[] (array seps)	0	Transcript on the protein-DNA interaction area. Use Ensembl transcript id. Separate multiple transcripts with vertical bars in the form of transcriptA transcriptB transcriptC (See external CV description A.2)

2.6 Regulatory Regions

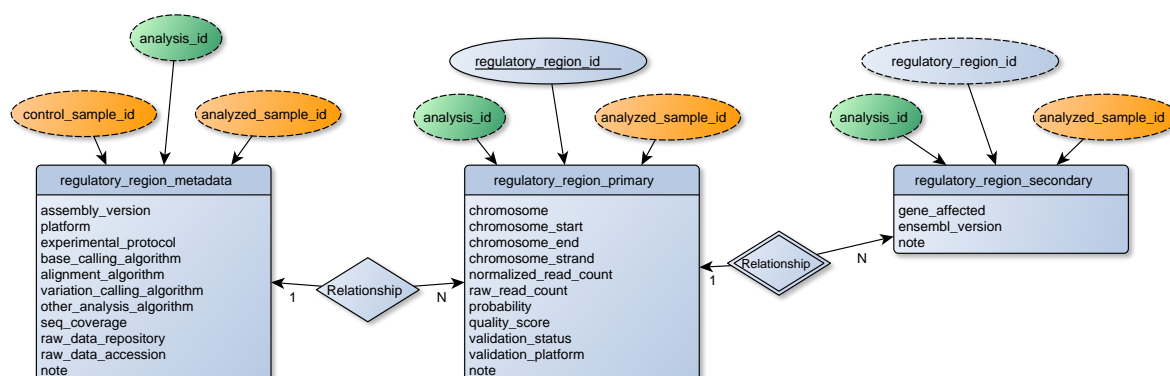

Figure 2.7: Regulatory Regions Sub-Schema

2.6.1 Regulatory regions – Metadata File

Regulatory regions [rreg] – Metadata File [m]

Table 2.6.1: Regulatory regions – Metadata File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_calling_algorithm	compound <i>name;url</i>	R	Name of base calling algorithm and URL to written protocol
control_sample_id	string	R	Unique identifier for the analyzed control/matched sample
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.6.2 Regulatory regions – Primary Analysis File

Regulatory regions [rreg] – Primary Analysis File [p]

Table 2.6.2: Regulatory regions – Primary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
<i>Continued on next page</i>			

Table 2.6.2 – concluded from previous page

Name	Type	Need	Description / Values
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
regulatory_region_id	string	I	Unique identifier for the identified regulatory region
chromosome	integer	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
normalized_read_count	decimal	R	Normalized count of sequencing reads if analyzed by sequencing platforms
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the mutation/variation call
quality_score	decimal	0	Average quality score for the mutation/variation call
raw_read_count	integer	R	Raw count of sequencing reads if analyzed by sequencing platforms
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

2.6.3 Regulatory regions - Secondary Analysis File

Regulatory regions [rreg] – Secondary Analysis File [s]

Table 2.6.3: Regulatory regions - Secondary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
<i>Continued on next page</i>			

Table 2.6.3 – concluded from previous page

Name	Type	Need	Description / Values
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
ensembl_version	integer	R	Version of Ensembl gene build used for annotation
gene_affected	string[] (array seps)	R	Gene affected. Use Ensembl gene id, separated by when there is more than one. If no gene is affected, don't put an entry (See external CV description A.1)
note	string	0	Optional field to leave notes
regulatory_region_id	string	I	Unique identifier for the identified regulatory region

2.7 DNA *-lation (Methylation, Hydroxy-Methylation, Formylation, etc...)

Name	Type	Need	Description / Values
alignment_algorithm	compound <i>name;url</i>	R	Name of alignment algorithm and URL to written protocol
assembly_version	integer	R	Version of reference genome assembly (See CV A.8)
base_calling_algorithm	compound <i>name;url</i>	R	Name of base calling algorithm and URL to written protocol
control_sample_id	string	R	Unique identifier for the analyzed control/matched sample
experimental_protocol	compound <i>name;url</i>	0	Name of experimental protocol and URL to written protocol
methylation_calling_algorithm	compound <i>name;url</i>	0	Name of variation calling algorithm and URL to written protocol
note	string	0	Optional field to leave notes
other_analysis_algorithm	compound[] <i>name;url</i> (array seps ,)	0	Names of other analysis algorithms. Separate multiple algorithms by commas.
platform	integer	R	Platform or technology used in the detection phase (See CV A.6)
raw_data_accession	compound <i>accession;url</i>	0	Accession and URL for referencing the raw data at the public repository
raw_data_repository	integer	R	Public repository where raw data is submitted (#) (See CV A.9)
seq_coverage	decimal	0	Sequence coverage if analyzed by sequencing platforms

2.7.2 DNA *-lation - Primary Analysis File

DNA *-lation [dlat] - Primary Analysis File [p]

Table 2.7.2: DNA *-lation - Primary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
d_lated_fragment_id	string	I	Unique identifier for the methylated fragment, in the form d*-lationType chromosome_chromosomeStart_chromosomeEnd
Continued on next page			

Table 2.7.2 – continued from previous page

Name	Type	Need	Description / Values
beta_value	decimal	0	DNA *-lation beta value for interrogated site
c_total_reads	decimal	R	Reads which has identified this position as a cytosine
chromosome	integer	R	Name of the chromosome containing the experimentally detected feature (mutation, variation, expression, ...) (See CV A.7)
chromosome_end	integer	R	End position of the mutation/variation on the chromosome
chromosome_start	integer	R	Start position of the mutation/variation on the chromosome
chromosome_strand	integer	0	Strand where it was detected the mutation/variation on the chromosome -1 = Reverse strand 1 = Forward strand
d_lated_reads	decimal	R	Reads which has identified this position as a DNA *-lated cytosine
d_lation_type	string	R	Type of DNA *-lation (Methylation, Hydroxy-Methylation, Formylation, etc...) m = Methylation (cytosine) hm = Hydroxy-Methylation (cytosine) hmU = Hydroxy-Methylation (uracil) f = Formylation (cytosine) ca = Carboxylation (cytosine)
note	string	0	Optional field to leave notes
probability	decimal	0	Probability of the DNA *-lation call
quality_score	decimal	0	Quality score for the DNA *-lation call
total_reads	decimal	R	Total number of reads over this position/segment, either identifying or not a cytosine, for sequencing platforms. Mean reads depth for other technologies
validation_platform	integer	0	Platform or technology used in validation (See CV A.6)
validation_status	integer	R	Indicate if the mutation/variation has been validated -1 = Not valid 0 = Not tested 1 = Validated

Table 2.7.3: DNA *-lation – Secondary Analysis File

Name	Type	Need	Description / Values
analysis_id	string	I	Unique identifier for the analysis performed for a particular set of samples
analyzed_sample_id	string	I	Unique identifier for the analyzed sample
d_lated_fragment_id	string	I	Unique identifier for the methylated fragment, in the form d*lacionType chromosome_chromosomeStart_chromosomeEnd
ensembl_version	integer	R	Version of Ensembl gene build used for annotation
gene_affected	string[] (array seps)	R	Gene affected. Use Ensembl gene id, separated by when there is more than one. If no gene is affected, don't put an entry (See external CV description A.1)
note	string	0	Optional field to leave notes

Appendix A

Controlled Vocabularies

A.1 Ensembl Genes

Valid Ensembl Genes identifiers

(See it at http://jul2012.archive.ensembl.org/Homo_sapiens/Info/Index)

A.2 Ensembl Transcripts

Valid Ensembl Transcript identifiers

(See it at http://jul2012.archive.ensembl.org/Homo_sapiens/Info/Index)

A.3 Cell Ontology

The Cell Ontology is designed as a structured controlled vocabulary for cell types

(See it at <http://cellontology.org/>)

A.4 ISO 3166-1 and ISO 3166-2

ISO 3166 is the International Standard for country codes and codes for their subdivisions. The purpose of ISO 3166 is to establish internationally recognised codes for the representation of names of countries, territories or areas of geographical interest, and their subdivisions.

(See them at http://www.iso.org/iso/country_codes.htm and http://en.wikipedia.org/wiki/ISO_3166-2)

Table A.4.1: ISO 3166-1 and ISO 3166-2 aliases

Alias	Key	Description
ALIAS:EAL	GB-CAM GB-ESS GB-HRT GB-NFK GB-SFK	East Anglia: United Kingdom region composed of the administrative counties of Norfolk to the north, Suffolk to the south, Cambridgeshire and Essex to the west.

A.5 Institution ID

Please contact DCC if your institution is not listed, or you wish to modify the text

Table A.5.1: Institution ID

ID	Institution
001	Spanish National Cancer Research Centre (CNIO, Madrid)
002	Barcelona Supercomputing Center (BSC-CNS, Madrid)
003	EMBL-EBI (Hinxton)

A.6 Value Codes for Platform or Validation Platform

Please contact the DCC if your platform/technology is not listed here.

Table A.6.1: Value Codes for Platform or Validation Platform

Key	Platform or Validation Platform
1	PCR
2	qPCR
3	capillary sequencing
4	SOLiD sequencing
5	Illumina GA sequencing
6	454 sequencing
7	Helicos sequencing
8	Affymetrix Genome-Wide Human SNP Array 6.0
